                                                                               method of detecting a CA nucleic acid, a method of diagnosing cancer, a method of treating cancer and a method of inhibiting expression of a CA nucleic acids in a cell. The CA nucleic acids are useful for detecting CA nucleic acids. The antibody is useful for detecting the presence or absence of cancer cells in an individual which involves contacting cells from the individual with the antibody and detecting a complex of a CA protein from the cancer cells and the antibody, where the detection of the complex correlates with the presence of cancer cells in the individual. The composition is useful for inhibiting growth of cancer cells in an individual or for delivering a therapeutic agent to cancer cells in an individual. The invention is also useful for diagnosing cancer, for treating cancer and for inhibiting expression of a CA gene in a cell. This sequence represents human cancer-associated cDNA of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     S
CC associated (CA) nucleic acid, comprising two or more nucleic acid probes.

CC The invention also relates to a peptide array comprising two or more isolated (CA) nucleic acid probes.

CC isolated polypeptides encoded by a CA nucleic acid sequence, a compound CC that binds to a polypeptide, which is prepared by immunizing a host animal CC with a composition comprising the polypeptide or its fragment which CC with a composition comprising the polypeptide or its antigen binding fragment, a composition comprising the antipody and a carrier, a method of screening for anticancer activity, a CC mucleic acid in a cell. The CA nucleic acid, a method of diagnosing cancer, a cCC mucleic acid in a cell. The CA nucleic acids are useful for detecting CA CC nucleic acid. The antibody is useful for detecting the presence of cancer cells in an individual which involves contacting cells from the individual with the particolar antibody where the detection of the complex correlates with the presence of cancer cells in an individual which involves contacting cells in an individual. The composition is useful for inhibiting growth of cancer cells in an individual. The invention is also useful for diagnosing cancer, for treating cancer and for inhibiting expression of a CA gene in cells in an individual. The invention is also useful for diagnosing cancer, for treating cancer and for inhibiting expression of a CA gene in cell. This sequence represents human cancer-associated cDNA of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nucleic acid array useful for detecting cancer associated comprises two or more nucleic acid probes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      07-APR-2005
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cytostatic; gene; ss.

Sequence 19. Application US/09954556

Patent No. 6900053

GENERAL INFORMATION:

APPLICANT: Brett P. Monia
APPLICANT: Susan M. Freier
APPLICANT: Susan M. Freier
APPLICANT: Scott Cooper
TITLE OF INVENTION: ANTISENSE MODULATION OF FIE
PILE REFERENCE: RTS-0250
CURRENT APPLICATION NUMBER: US/09/954,556
CURRENT APPLICATION AUTHORITY
NUMBER OF SEQ ID NOS: 108
SEQ ID NO 19
LENGTH: 2868
TYPE: DNA
ORGANISM: Homo sapiens
FEATURE:
NAME/KEY: CDS
LOCATION: (419)...(2734)
US-09-954-556-19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           문

Sequence 3171, Application US/09949016

Patent NO. 6812339

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASS

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF

FILE REFERENCE: CLOO1307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT FILING DATE: 2000-04-14

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR APPLICATION NUMBER: 60/241,756

PRIOR APPLICATION NUMBER: 60/237,768

PRIOR FILING DATE: 2000-10-20

JENIOR APPLICATION NUMBER: 60/231,498

PRIOR FILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: FASESEQ for Windows Version 4.0

SEQ ID NO 3171

LENGTH: 2079
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             음 성
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁

Sequence 39, Application US/11019829

Publication No. US20050136465A1

GENERAL INFORMATION:

APPLICANT: HOffmann-La Roche Inc.

TITLE OF INVENTION: Novel targets for obesity fro

FILE REFERENCE: 22304

CURRENT APPLICATION NUMBER: US/11/019,829

CURRENT FILING DATE: 2004-12-22

NUMBER OF SEQ ID NOS: 146

SOFTWARE: PatentIn version 3.2

SEQ ID NO 39

LENGTH: 4574

TYPE: DNA

ORGANISM: Homo sapiens

FEATURE:

NAME/KEY: fibroblast growth factor receptor 2 tr

LOCATION: (1). (4574)
